

## A leading chemical supplier leverages Office 365 to automate processes and reduce downtime

### Customer Profile:

The Customer is a leading global chemical supplier to the pulp and paper, oil and gas, chemical processing, mining, bio-refining and power markets. The company's product portfolio includes a broad array of process, water treatment and functional chemistries and state-of-the-art monitoring and control systems.

### Business Situation:

Rising Lotus Notes licensing costs, as well as functionality and supportability issues, prompted the company to move to Microsoft platform to run its Intranet.

The company approached WinWire for the redesign of their Intranet Site (InSite) in Office 365 platform leveraging its out of the box features. The solution needed to be integrated and flexible working platform for efficient management of contents and navigation.

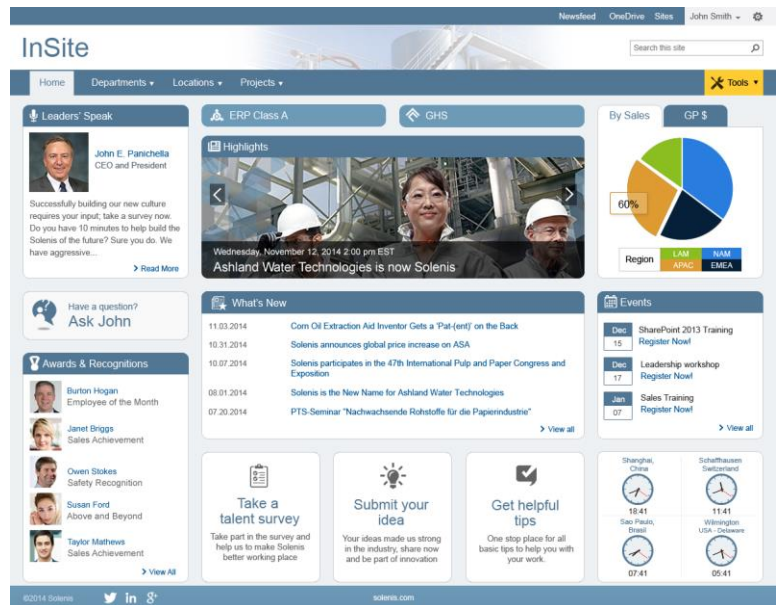

### Key requirements include

- Design master pages and page layouts
- Provide new Intranet home page layout options
- Provide new department intranet page layout to integrate with newly designed home page
- Design and implement improved site structure for new O365 intranet portal
- Build and deploy the main template for each department and ensure that a blank site is created with pre-defined containers for them on the office O365 platform
- Help manually migrate the content from Lotus Notes to the newly created containers.
- Provide approach on how to migrate the content and secure on the new platform

### WinWire Solution:

The intranet portal has been developed on Office 365 platform leveraging out-of-the-box SharePoint features. Enterprise search, MySite, Term store management, Design manager are configured by leveraging the Office 365 functionalities.

- Designed flexible information architecture which made content easily searchable
- Implemented well thought out Governance strategy which enabled IT and Business to work together with the objective of making platform successful and manageable
- Better document collaboration and management capabilities
- One place for all the organization information needed by employees
- Implemented improved site structure for easy navigation
- Improved collaboration among groups and teams
- Improved security at both a broad and single item level

### Benefits:

- End User improvements that lead to increased productivity & adoption
- Improved efficiency and collaboration among the groups and teams
- Users can find relevant information more quickly and easily with new search experience & engine
- Track and manage information as it evolves through document versioning
- Easy site administration through features such as new department creation, adding new app etc...
