

Start your journey to modernization

APP MODERNIZATION ASSESSMENT PROGRAM

Modernize your legacy apps by using containers, serverless computing and other Azure services, to deliver innovation, customer insight, faster app delivery, scalability, and cost savings. See how Azure can boost your digital transformation with the App Assessment Program.

What you receive

The App Modernization Assessment Program is a assessment of your traditional apps. With this program, WinWire Technologies will assess your applications based on a variety of factors including how your application is structured, how complex it is, how secure it is, and even how ready it is for cloud integration.

Once the Assessment is complete you will receive:

 <p>Application assessment results and scoring</p>	 <p>Risks & complexities</p>
 <p>Roadmap for app modernization</p>	 <p>Azure spend consumption estimate via Azure Calculator</p>

App modernization benefits

Engage customers

Leverage the cloud to deliver value faster and respond to changes driven by customer needs. By using flexible resources, Azure helps you deliver early and often. Implement functionality that helps you understand how your customer uses your application, so you can deliver better experiences faster.

Enable employees

Azure enables teams to use "hypothesis-driven development" techniques to try out different business models and workflows, iterate quickly, and deliver innovation. Through digital transformation, teams can create new efficiencies and get quick access to data that will empower them to make decisions about the business and your customers.

Transform products

These leaner and quickly-evolving applications will lead the way to a new business model that keeps you ahead of your competition. Your digital transformation can enable your customers to get a more customized experience from your products, take control of how the product is used, and get access to options not easily implemented with older, monolithic applications.

Optimize operations

Gain operational insights on how your app runs and how it is used. Expand or decrease resource usage to meet demands. Reduce scale times to minutes or even seconds. Use Azure's integrated analytics to find problems before your customers do.

Get started

Create a path towards Azure as part of your Digital Transformation. Modern Apps can start on IaaS resources and then take advantage of PaaS, containers, and Azure's serverless resources to enable innovation for your customers.

Why WinWire?

WinWire Technologies, a Microsoft Managed Partner uses its Cloud Assessment Tool (CAT) - a proven and well-defined assessment and design definition offering to help customers optimize their modernization initiatives for mission critical-business applications.

WinCAT provides customers with a rapid, low-intrusion assessment, and a data-driven business case to make the move to Azure for modernization of infrastructure and applications.

Why Azure?

Scale instantaneously, minimize support infrastructure, and reduce ongoing daily maintenance.

Azure supports infrastructure as a service (IaaS) on Linux, Java, and PHP Web application platforms.

Improve your back-end by connecting and simplifying systems to create a user-centric front-end and improve employee experience.

Run your stack on Azure and improve project delivery time with fast implementation of development environment.

Develop and test your Linux and open source components in Azure.

Run virtually any app, using your data source, with your OS, on your device.

Apps to modernize

HR
Recruiting, Learning, Time Tracking, Vacation, Employee, Payroll, Company News, Travel, Performance Review

Finance
Purchase Order, Compliance, Commercial, Accounts, Tax, Assets, Dashboards, Budgets, Approvals, Invoice

Operations
Deliveries, Inventory, Warranty, Inspection, Supply Chain, Order, Resources, Safety, Repairs, Visitor

Marketing
Collateral, Ad Scheduling, Ad Inventory, Brand Management, Production, Scheduling, Channel and Promotion Management

Legal
Intellectual Property, Compliance

IT
Helpdesk, Licensing, Projects, Quality Control, App Dev, Compliance, Enterprise Content Management

Field
Service Order, Case Management, Fulfillment, Troubleshooting, Sales, CRM
